

INTRODUCTION TO JOSÉ OITICICA FILHO'S “SETTING THE RECORD STRAIGHTER”¹

ALISE TIFENTALE

A key figure in Brazilian postwar photography, José Oiticica Filho (1906–64) established a link between Brazilian modernist photography and the international photo-club culture of the 1950s. Although his legacy today remains overshadowed by that of his son, artist Hélio Oiticica (1937–80), scholarship in Brazil acknowledges him as an important experimental photographer.² Little, however, is known about his work as a statistician. During the 1950s, he compiled extensive data tables pertaining to the activities of hundreds of photographers throughout the world. Oiticica Filho laid the foundation for his innova-

tive statistical work in an article he wrote, titled "Setting the Record Straighter," part of which is reprinted here. The original article was published in three consecutive issues of the magazine *Boletim Foto Cine* in 1951, a publication of the São Paulo photo-club Foto Cine Clube Bandeirante (FCCB).³ FCCB was founded in 1939 and played a central role in the São Paulo avant-garde art scene during the 1950s, when its members began to explore semi-abstract or entirely nonrepresentational photography. Although based in Rio de Janeiro, Oiticica Filho was an active member of FCCB and among the pioneers of the São Paulo modernist photography scene.⁴ Other notable FCCB mem-

bers include Gertrudes Altschul (1904–62), Geraldo de Barros (1923–28), Thomaz Farkas (1924–2011), German Lorca (b. 1922), Ademar Manarini (1920–89), and José Yalenti (1895–1967). Oiticica Filho was a regular contributor to *Boletim*, established in May 1946 as a newsletter for FCCB. By 1951, *Boletim* had evolved into an illustrated forty-page monthly magazine under the editorial guidance of Jacob Polacow (1913–66) and the general leadership of Eduardo Salvatore (1914–2006), the club's founder and president. Alongside single-page reproductions of selected works by FCCB members and detailed chronicling of the club's social events, *Boletim*

featured reviews of photography exhibitions and articles on artistic and technical aspects of the medium.

Photo-clubs had existed as informal organizations in many countries since the late 19th century, but Oiticica Filho was among the first to grasp the unprecedented rate at which photo-club culture expanded on a global level beginning in the late 1940s. The most important clubs of the 1950s united professional photographers, photojournalists, and dedicated artists by providing the principal self-governed institutional structure for the development and promotion of photography as an autonomous and creative field. These clubs offered a social structure, an organizational framework, and exhibition opportunities for a wide range of photographic practices. As historian Kerry Ross argues, photo-clubs functioned as “the primary institutional setting for the democratization of the fine arts,” as “venues of aesthetic socializing” and “politically neutral spaces to exercise liberal ideals.”⁵ While clubs across the globe shared similar organizational structures, the lives and careers of participating photographers, and the kinds of work they produced, varied radically from location to location. The photographers’ shared aspiration for respect and prestige, something that photography lacked in the 1950s, united these diverse groups. The photo-club culture was therefore instrumental in shaping the recognition of photography as an art form, contributing to the gradual professionalization of photography and the conscious separation of the medium into distinct functional fields such as photojournalism, fashion photography, portraiture, advertising, fine arts photography, and so on, distinctions that are taken for granted today.

The work of most photo-clubs revolved around international juried exhibitions (also referred to as *salons*) selected through open calls. Photo-club salons of the 1950s depended exclusively on the initiative and unpaid labor of photographers who were their organizers, jurors, and participants, as well as their primary audience. There was no market for the photographic prints circulated in these photo-club salons, and at the end of each exhibition, all the prints were returned to their authors. Participants even had to pay a small application fee to help organizers cover expenses. The word *salon*, when applied to these juried photography exhibitions, indicates the photographers’ desire to

elevate the medium to the status of art. During the 1950s, photographers relied on photo-club salons as their primary exhibition venues because the established systems of art museums and galleries welcomed their work only as rare exceptions. In Brazil, such exceptions were the solo shows by FCCB members German Lorca and Ademar Manarini at the Museum of Modern Art in São Paulo in 1952 and 1954.⁶ Moreover, FCCB as a group was invited to participate in the second São Paulo Biennial in 1953. Club members Geraldo de Barros, Ademar Manarini, Eduardo Salvatore, and José Yalenti orchestrated this participation.⁷ FCCB also showcased their work in subsequent editions of the biennial. Nevertheless, as Oiticica Filho's article indicates, exhibiting in photo-club salons was paramount to the photographers' debates. Historians of Brazilian photography have coined the term *fotoclubismo*, derived from the term *foto clube* (photo club) in Portuguese, to describe the creative yet competitive culture that prevailed in the 1950s photo-clubs.⁸ Oiticica Filho's writings about *fotoclubismo* offer detailed insight into the struggle of a diverse group of photographers for recognition of their work.

Oiticica Filho chose to use scientific methods including statistics and data analysis, an approach not often used to explain art or art exhibitions, to address the complex and often confusing culture of photo-club salons and *fotoclubismo*. Typical of his colleagues in the FCCB, most of whom had successful careers in the legal, medical, and industrial fields, Oiticica Filho had no formal training in the arts, and in fact, he came from a family of scholars.⁹ In 1930, he graduated from the National School of Civil Engineering in Rio de Janeiro. Between 1928 and 1962, he lectured in mathematics at several schools in Rio, and from 1943 to 1964 he worked as an entomologist at the National

Museum of the University of Brazil.¹⁰ His interest in photography began with the detailed images of insects and flowers he took as part of his scientific work in the late 1940s. In 1947 he received a Guggenheim Foundation grant for research in organismic biology and ecology at the Smithsonian Institution, where he worked from 1948 to 1950. During these two years he and his family lived in Washington, DC.¹¹ His background in engineering and the sciences helped shape Oiticica Filho's analytic perception of photographic art as it emerged from photo-club culture, while his stay in the United States broadened his perspective on the international scope of this culture.

In the article partially translated here for the first time, Oiticica Filho illuminates the inner workings of photo-club culture, photographers' motivations to participate, and their major concerns about the salon system. At the core of Oiticica Filho's "Setting the Record Straighter" is a debate on participation in salon exhibitions, informed by the ongoing rivalry between São Paulo-based "Paulista" photographers and Rio de Janeiro-based "Fluminense" photographers, and especially between members of the FCCB, of which Oiticica Filho was a part, and the Sociedade Fluminense de Fotografia (SFF), based in the municipality of Niterói in the state of Rio de Janeiro.¹² Since the salons in which these groups participated depended on a jury selection

12 The rivalry to which photographers attached such significance illustrates the competitive spirit that thrived among them. The principles of competitive photography in the photo-club culture of the 1950s are outlined in Alise Tifentale, "Rules of the Photographers' Universe," *Photoresearcher*, no. 27 (2017): 68–77.

process that was highly subjective and often obscure, Oiticica Filho meticulously accumulated available data to lend a certain clarity, and even scientific logic, to a field where participation, and even the number of prints accepted at different salons, had become crucial indicators of success. A member of FCCB but also a resident of Rio, Oiticica Filho emerged as a mediator between the two groups—an impartial scientist who sought a solution in data, not in clashes between egos.

Oiticica Filho's theoretical work is based on statistical data collection and analysis—scientific methods that are closer to sociology than to art criticism or any other branch of the humanities. His research anticipates the sociology of art, a field that was to emerge in the 1960s and 1970s, with a focus on “the structure in which art is discovered, discussed, defined, purchased, and displayed.”¹³ Central to the sociology of art is the influential research of French cultural sociologist Pierre Bourdieu during the 1960s. Like Oiticica Filho, Bourdieu had once been an active photographer: between 1957 and 1960, he produced numerous photographs in Algeria, where he worked as a lecturer at the University of Algiers.¹⁴ As was the case with Oiticica Filho, Bourdieu looked to statistics as a main source for his sociological study of contemporary photographic practices in France. He conducted this research with colleagues Luc Boltanski, Robert Castel, Jean-Claude Chamboredon, and Dominique Schnapper between 1961 and 1964, and discussed it in the book *Photography: A Middle-Brow Art (Un art moyen; essai sur les usages sociaux de la photographie)*. The authors identify four major social functions of photography and, correspondingly, four types of photographers: occasional family photographers, amateurs, professionals, and photographic artists. Thanks to his choice to study photography rather than a more prestigious form of art, sociologists today recognize Bourdieu's project as a groundbreaking “cultural attack.” Its revolutionary nature comes to light only when we realize, as sociologist of art Nathalie Heinich writes, “just how low photography was at this time in the artistic hierarchy.”¹⁵

Bourdieu's book introduces the idea that practicing photography as art was, among other things, a means of upward social mobility. His sociological perspective helps to explain the amount of attention that Oiticica Filho, a distinguished scientist and renowned photographer, dedicated to the minutiae of salon participation. The photo-club salons were of cardinal importance to photographers in the 1950s because they offered an exceptional avenue to accrue individual recognition. The salons were as significant for photographers as gallery and museum exhibitions were for artists working in other media.

The impetus for writing "Setting the Record Straighter" can be found in an earlier article, published in the October 1950 issue of *Boletim*, where Oiticica Filho reviewed the Ninth International Salon of São Paulo. In that article he criticized photographers from Rio de Janeiro for not participating in the salon and accused them of diminishing the overall impact of the Brazilian section of the exhibition.¹⁶ Rio de Janeiro photographers responded to Oiticica Filho in several polemic articles in the SFF magazine and in *Revista Cine Fotográfica*.¹⁷ Among these responses was an anonymous article titled "Setting the Record Straight," which blamed the São Paulo salon organizers for being biased against the work of Rio photographers, eventually leading the latter group to boycott exhibitions organized in São Paulo. To this article from *Revista Cine Fotográfica*, Oiticica Filho responded with the three-part "Setting the Record Straighter," one part of which is translated here.

In the first part of "Setting the Record Straighter," Oiticica Filho illustrates his statistical and data-analytic methodology by presenting his own photo-club activity between 1945 and 1950 in the form of extensive tables listing the prizes and honorable mentions he received as a photographer, along with lists of his articles on photography and reproductions of his works in catalogs and photography magazines.¹⁸ After establishing his expertise in the field, the author introduces a comparative data table showing the numbers of prints by FCCB and SFF members accepted in juried exhibitions between 1947 and 1950. In the article, he claims that he presents these tables "not with the intention of comparing two Brazilian photography clubs, but to reestab-

18 Oiticica Filho, "Reforçando os pontos dos ii," 21–25.

lish factual truths deeply misinterpreted by disloyal and irresponsible propaganda aimed at harming those who work hard and honestly toward the progress of the art of photography amongst us.”¹⁹ Amid all the subjective judgments that characterized the salons, as well as the confusion about artistic criteria that resulted from them, Oiticica Filho calls for objectivity and a scientific approach to evaluating achievements in the field.

In the second part of the article, which is reprinted here, Oiticica Filho suggests how statistical methods can be helpful for grasping the mechanisms of photo-club culture. Most importantly, he makes a distinction between qualitative and quantitative aspects of *fotoclubismo*, which he argues were too often confused in the past, and suggests that statistical methods and data analysis, if applied correctly, can be useful for evaluating the quantitative parameters of the field. For example, analysis of the numbers of participants and accepted works in international salons reveals different levels of activity from a variety of individuals, clubs, and even countries. Yet such an approach, as Oiticica Filho readily admitted, did not help understand the aesthetics and emotional impact of photographs. He also warns that quantitative factors should not be conflated with qualitative ones: a higher number of accepted works does not automatically mean a higher level of artistic achievement. He further admits that there are limitations to statistical methods, and that they cannot explain, for example, the success or failure of an individual photograph. Judges of the juried exhibitions were typically well-established photographers whose personal preferences solely determined the selection of accepted works. These choices, according to him, cannot be measured scientifically.

The third part of the article uses statistical methods to compare the achievements of FCCB and SFF members. It begins with the assertion that “the reasons for rejection are varied and impossible to analyze in simple data tables.”²⁰ Oiticica Filho argues that SFF members wrongly blamed FCCB for being biased and that their accusation resulted from an incorrect use of statistical methods. While SFF members had compared the *numbers* of accepted works between the clubs to prove that their work had been slighted by the jury of the Ninth International Salon of São Paulo in 1950, Oiticica Filho maintains that

19 Ibid., 24. Translated by Luisa Valle.

20 José Oiticica Filho, “Reforçando os pontos dos ii. Parte 3,” 26. Translated by Luisa Valle.

a comparison should be made between the *percentage* of acceptances from SFF and the acceptances from all submissions to any given salon, calculated as a proportion of the accepted prints among all submitted prints. The acceptance rate of Fluminense works (for example, 30.4 percent in 1948 and 16.6 percent in 1949) is then revealed to be close to the average acceptance rate in the São Paulo salon (36.7 percent in 1948 and 20.7 percent in 1949). This discovery, in the author's view, blunts any accusation of an existing bias against SFF at the São Paulo salon.

Without other established criteria of evaluation, these numbers provided evidence of various photographers' activity and a method of comparing their successes. These debates, and Oiticica Filho's recourse to statistics, also point to photography's outsider status and the frustration of its practitioners in the 1950s, in Brazil as elsewhere. Collecting statistical data about different exhibitions and their participants served as one way of at least outlining the scope of a field that was, in sociologist Jean-Claude Chamboredon's words, "uncertain of its legitimacy, preoccupied and insecure, perpetually in search of justification."²¹

"For me, the most moving aspect of looking at a salon catalog is seeing the names of Brazilians entangled with names of artists from other parts of the world," acknowledges Oiticica Filho.²² He continues that "this is what patriotism means to me, a type of sane patriotism expressed in seeing my name and the name of my country among names of artists from other countries."²³ In his conclusion to the article, Oiticica Filho calls for national unity among Brazilian photographers and reminds his audience that "creating a brotherhood between the clubs and societies of photography in Brazil" is the goal of a new organization, the recently established Brazilian Federation of Photographic Art (*Federação Brasileira de Arte Fotográfica*).²⁴ Over the

23 *Ibid.*, 22.

24 Oiticica Filho, "Reforçando os pontos dos ii. Parte 3," 28. Translated by Luisa Valle. Elsewhere, Oiticica Filho wrote on the Federation's foundational congress, which took place in 1951, and on the ideals of unification that promised to redeem the destructive effects of rivalry among the clubs he had analyzed in "Setting the Record Straighter." José Oiticica Filho, "Se concreto la primera convención brasilera de arte fotográfico," *Correo Fotográfica Sudamericano* (Buenos Aires) 30, no. 653 (February 1951): 38; "First Brazilian Convention," *PSA Journal* (New York) 17, no. 4 (April 1951): 218.

course of the 1950s, the Federation united thirty photo-clubs and a total of 4,106 photographers throughout Brazil, strengthening the ties between Brazilian photographers and the world's photographic art community.²⁵

Oiticica Filho played a role in championing the international connectivity of the Federation, which had been established with the intention of joining the International Federation of Photographic Art (Fédération Internationale de l'Art Photographique, FIAP), founded in Switzerland in 1950. FIAP perceived photographers as a distinct social and professional group whose geographically scattered members could be united around the idea of the medium's cultural and social autonomy. Embodying postwar humanism and idealism, the founders of FIAP envisioned the organization as a forum that could offer equal opportunity for participation from all countries "regardless of their power or their poverty."²⁶ Each participating country was represented in FIAP by a national federation of photography that united photo-clubs in that country. Over the following decade, FIAP mobilized photo-clubs in fifty-five countries in Europe, Latin America, Asia, and Africa, becoming the first post-World War II organization to provide photographers with an institutional space that existed outside the market and that transcended political and ethnic borders.

The founder and president of FIAP, Belgian photographer Maurice Van de Wyer (1896–1994), visited São Paulo and FCCB on a regular basis during the 1950s, and while it is not clear whether Oiticica Filho and Van de Wyer ever met in person, Oiticica Filho became an active contributor to the work of FIAP, emerging as the federation's pioneering record-keeper and data analyst.²⁷ During the 1950s, Oiticica Filho published several statistical reports about international photography salons in the FIAP yearbooks and the organization's magazine, *Camera*, thus expanding the application of the statistical tools that he established to analyze photo-club culture in Brazil to a global level.
